ARTICLES PUBLISHED BY IBAF-CNR GROUP ON PHYTOREMEDIATION

The IBAF Research group is composed by:

Angelo Massacci – Ph.D, Graduated in Chemistry
Director of the Institute of IBAF-CNR

Massimo Zacchini – Ph.D, graduated in Agricultural Sciences
Head of the Section IBAF-CNR of Monterotondo

Fabrizio Pietrini – Ph.D, graduated in Biological Sciences
Researcher at CNR-IBAF

Daniela Di Baccio – Ph.D, graduated in Agricultural Sciences
Researcher at CNR-IBAF

Valentina Iori – Ph.D, graduated in Biological Sciences
Post-Doc at CNR-IBAF

Laura Passatore – Ph.D, graduated in Environmental Sciences
Post-Doc at CNR-IBAF

INTERNATIONAL JOURNALS AND PHD THESIS

1. Ancona et al. (2016) Plant-assisted bioremediation of a historically PCB-contaminated area in Southern Italy. New Biotecnology 09/2016;
12. Iori et al. (2011) Induction of metal binding compounds and antioxidative defence in callus cultures of two black poplar (P. nigra) clones with different tolerance to cadmium. Culture 108 (1), pp. 17-26 V.
16. Iori et al. (2016) Physiology and genetic architecture of traits associated with cadmium tolerance and accumulation in Populus nigra L. Trees 30 (1), 125-139
17. Iori et al. (2017). Analysis of biometric, physiological, and biochemical traits to evaluate the cadmium phytoremediation ability of eucalypt plants under hydroponics. iForest - Biogeosciences and Forestry in press.
33. Pietrini et al. (2016) Combined effects of elevated CO2 and Cd-contaminated water on growth, photosynthetic
response, Cd accumulation and thiolic components status in Lemma minor L. Journal of hazardous materials 309, 77-86

SELECTED PROCEEDINGS

41. Gaudet et al. (2010) IUFRO- Fifth International Poplar Symposium, Orvieto (Italy);
42. Paris et al. (2009) - Linking wood bioenergy production with soils and wastewater phyto remediation with poplar and willow trees in Italy. First International Conference on Advances in Wastewater Treatment and Reuse, 30 June – 02 July 2009

BOOKS

50. Massacci et al. Capitolo su Fitorimedio bioassistito, pp.21-34 nel libro: Le innovazioni tecnologiche nel settore della caratterizzazione e bonifica dei siti contaminati, Caucci Editore, a cura di Brugnoli E, Uricchio VF, Massarelli C, Zurlini G,

TECHNICAL REPORTS

53. Massacci et al. (2009). Fitoestrazione e fitostabilizzazione di metalli pesanti nel sito contaminato Isola dei Petroli, Porto Marghera (Venezia), contratto ENI R&M Nr 4900157051/MF5

54. Massacci et al. (2009). Associazione di biorimedio di isomeri dell’esaclorocicloesano a produzione di biomassa da pioppo per energia nel bacino del fiume Sacco. Contratto per convenzione CNR-IBAF e Ufficio commissariale per l’emergenza nel territorio del bacino del Fiume Sacco tra le province di Roma e Frosinone.
